Assoc. Prof. PhD Gabriel Raicu, Vice-Rector of Constanta Maritime University – ***Maritime cyber security education and current technological limit***

Cyber security education has proven to be a defining factor in the success of a secure social life. Investing in security education is a major asset in which modern society must concentrate resources. It is about all levels of education and training, all public and private partnerships on education and all forms of short, medium and continuous learning. Education must ensure cyber security from the design of secure applications to the effective training of all possible users.
